

Drone Support Services, LLC provides FAA Part 107 aerial documentation support for prime contractors, public agencies, A/E teams, and PCA consultants that need organized visual records of agreed exterior areas.

CORE COMPETENCIES

- **Project-specific aerial site documentation** — agreed exterior areas including facilities, roofs, facades, parking and circulation areas, visible drainage paths, work areas, and other project locations.
- **Organized visual records** — high-resolution imagery, location-referenced image sets, and documentation outputs structured by the agreed project scope.
- **Specialized capture when scoped** — orthomosaic property-overview imagery, exterior panoramas, video, and technical flight metadata when expressly included in the engagement.
- **Subconsultant aerial capture** — support for prime contractors, A/E teams, and PCA consultants when roofs, upper facades, or elevated exterior features are difficult to access from grade.

DIFFERENTIATORS

- **Prime-contractor support** — project-specific aerial capture aligned to the agreed scope, site-access procedures, and deliverable needs.
- **Clear scope control** — coverage areas, special outputs, schedule, and capture limitations confirmed for each engagement.
- **Organized deliverables** — imagery and visual documentation structured by agreed area, with capture limitations stated where applicable.
- **Single-point accountability** — a consistent coverage plan flown to the same specification every engagement, from capture through processing and delivery.
- **Local availability** — Central Valley base; Bay Area and Sacramento by engagement.
- **Contracting readiness** — FAA Part 107 certified; SAM.gov and Cal eProcure active; California Small Business and Micro Business certified; federal small/disadvantaged-business credentials on file.

CAPABILITY DEMONSTRATIONS

Visual demonstrations of aerial site documentation, commercial roof documentation, and parking and site documentation illustrate DSS capture and deliverable capability. They are not presented as contract past performance.

View sample deliverables at <https://dronesupportservices.net/sample-portal>

SCOPE BOUNDARY

DSS documents what is visible in the agreed imagery. DSS does not provide engineering, land surveying, inspection, code-compliance, repair, safety, cost-estimating, legal, or other professional conclusions outside the agreed documentation scope.
